Introduction

This report presents the work I have done during my first year as a PhD student at the Department of Health Sciences, University of Leicester, under the supervision of Dr. Michael Crowther and Prof. Keith Abrams.

I will begin by briefly introducing the topic of survival analysis in Chapter 1. Second, I will introduce survival models with random effects (e.g. frailties, in the simplest form) and computational challenges they present in Chapters 2 and 3, respectively. Third, I will present the results of two simulation studies in Chapters 4 and 5; the first simulation study investigates the accuracy of quadrature methods when approximating analytically intractable terms, while the second simulation study investigates the impact of model misspecification in survival models with shared frailty terms. Fourth, I will introduce an interactive tool I have been developing to aid the dissemination of results from simulation studies in Chapter 6. Then, I will introduce the problem of informative visiting process in clinical research using healthcare consumption data in Chapter 7, and how we aim to evaluate and compare the different approaches that have been proposed and utilised in literature to tackle such problem in Chapter 8. Finally, I will briefly summarise the training and personal development activities I have participated to during the first year of my PhD in Chapter 9.

Chapter 1

Introduction to survival analysis

Chapter 2

Survival models with random effects

Chapter 3

Computational challenges in survival models with random effects

Chapter 4

Simulation study: accuracy of Gaussian quadrature

Chapter 5

Simulation study: impact of misspecification in survival models with shared frailty terms

Chapter 6

Exploring results from simulation studies interactively

Chapter 7

Informative visiting process

Chapter 8

Future research developments

Chapter 9

Personal development

In this chapter I will introduce and briefly discuss the personal development activities I carried out during the first year of my PhD. In particular, I will present the supervisory meetings, training courses, and conferences I attended.

9.1 Supervisory meetings

I have been meeting my supervisors at least once a month for formal supervisory meetings, with summaries produced and shared between us; a comprehensive list of supervisory meetings is available on PROSE (<https://prose.le.ac.uk>). Additionally, we held informal meetings to discuss developments and more urgent matters more often, whenever it was needed and every week on average.

9.2 Training and courses

I have attended a wide variety of courses during my first year, both externally and internally to the University of Leicester. The external courses I attended are:

- *Efficient R Programming*, on November 8th 2016, organised by the Royal Statistical Society in London. The instructor was Dr. Colin Gillespie, from the University of Newcastle, United Kingdom, and Jumping Rivers. The course covered how to program efficiently with R; in particular, it covered common pitfalls when writing R code, code profiling, RCpp, and parallel programming. General hints and tips were provided.
- *Introduction to causal inference*, on April 25th and 26th 2017, organised by the Biostatistics Research Group at the University of Leicester and delivered by Dr. Arvid Sjölander from Karolinska Institutet, Stockholm, Sweden. The course provided foundational concepts of causal inference such as the difference between association and causation, the counterfactual framework, exchangeability, directed acyclic graphs, methods for estimating a causal effect, etc. Additionally, it provided an introduction to more advanced methods such as instrumental variables and Mendelian randomisation.

- *Using simulation studies to evaluate statistical methods*, on May 22nd 2017, organised by University College London. The course was delivered by Dr. Tim Morris, Prof. Ian White and Dr. Michael Crowther, and it covered the rationale for using simulation studies, important concepts to keep in mind when planning a simulation study, computational tools, estimates of uncertainty, and tools for improving reporting and dissemination.
- Workshop on *Joint modelling of longitudinal and time-to-event data with R*, on July 5th, 2017, organised by the Department of Biostatistics of the University of Liverpool. The course was delivered by Dr. Graeme Hickey, and provided an introduction to joint models of longitudinal and survival data, including extensions to incorporate competing risks and multiple longitudinal processes and a practical session using R.

I have attended a few courses within the University and not offered on PROSE; specifically, I attended a course on *Time series analysis with R* (November 10th, 2016), a course on *Data visualisation* (November 15th, 2016), and a course on *High performance computing at Leicester* (February 8th, 2017). The latter was particularly important, as it allowed me to make better use of the high-performance computing facilities offered by the University. I also attended the *Preparing to teach in higher education* workshop, strand A (July 24th and 27th 2017).

Additionally, I have attended the following PROSE training sessions to develop personal and communication skills in research settings. These are listed below:

- *Planning your literature search*, October 21st 2016;
- *Conducting your literature search*, October 25th 2016 ;
- *Assertiveness*, November 14th 2016;
- *Introduction to critical thinking*, December 15th 2016;
- *Presentations A: Fundamentals of an effective presentation*, January 30th 2017;
- *Communication in research and other work settings*, January 31st 2017;
- *Enhancing your digital profile*, February 2nd 2017;
- *Saying it with your abstract*, February 10th 2017;
- *Designing a poster*, February 27th 2017;
- *Leadership in research and other work environments*, February 28th 2017;
- *Preparing for the probation review (Physical natural and medical sciences)*, May 30th 2017.

9.3 Conferences

I have attended a number of conferences during this year, in which I delivered the following oral presentations:

- Survival Analysis for Junior Researchers conference, held in Leicester, UK, on April 5th and 6th 2017. I delivered a talk titled *Direct likelihood maximisation using numerical quadrature to approximate intractable terms*;

- Statistical Analysis of Multi-Outcome Data (SAM) conference, held in Liverpool, UK, on July 3rd and 4th 2017. I delivered a talk titled *Impact of model misspecification in survival models with frailties*;
- Annual Conference of the International Society for Clinical Biostatistics conference, held in Vigo, Spain, on July 9th to July 13th 2017. I delivered two talks: a titled *Impact of model misspecification in survival models with frailties* during the main conference, and a talk titled *Exploring results from simulation studies interactively* during the Students' Day organised on July 13th.

Additionally, I delivered an oral presentation on previous work external to my PhD project during the 54th ERA-EDTA Congress held in Madrid, Spain, between June 3rd and June 6th. The ERA-EDTA Congress is the main conference in the field of Nephrology in Europe, with approximately 10,000 participants in 2017. I delivered my presentation, titled *Inappropriate prescription of nephrotoxic drugs to individuals with chronic kidney disease*, to an audience of clinicians, epidemiologists, clinical researchers, and other stakeholders.
